Johnny Mercer's early songs became staples of the big band era and were regularly featured in the musicals of early Hollywood. With his collaborators, who included Richard A. Whiting, Harry Warren, Hoagy Carmichael, Jerome Kern, and Harold Arlen, he wrote the lyrics to some of the most famous standards, among them, "Too Marvelous for Words," "Jeepers Creepers," "Skylark," "I'm Old-Fashioned," and "That Old Black Magic." During a career of more than four decades, Mercer was nominated for the Academy Award for Best Song an astonishing eighteen times, and won four: for his lyrics to "On the Atchison, Topeka, and the Santa Fe" (music by Warren), "In the Cool, Cool, Cool of the Evening" (music by Carmichael), and "Moon River" and "Days of Wine and Roses" (music for both by Henry Mancini). You've probably fallen in love with more than a few of Mercer's songs—his words have never gone out of fashion—and with this superb collection, it's easy to see that his lyrics elevated popular song into art.

christmas around the world ibm: Engines Of Tomorrow Robert Buder, 2000-07-14 The U.S. economy is the envy of the world, and the key to its success is technological innovation. In this fascinating and in-depth account reported from three continents, Robert Buder turns the spotlight on corporate research and the management of innovation that is helping drive the economy's robust growth. Here are firsthand communiqués from inside the labs of a reborn IBM, resurgent GE and Lucent, research upstarts Intel and Microsoft, and other leading American firms -- as well as top European and Japanese competitors. It was only a few years ago that competitiveness experts -- U.S. well-wishers and naysayers alike -- concluded that America had lost its business and technological edge. The nation's companies, they asserted, couldn't match the development and manufacturing efficiency of overseas rivals. Yet now the nation is humming along, riding an unparalleled wave of innovation. Buder tells us this turnaround has come on many fronts -- in marketing, sales, manufacturing, and the creation of start-up companies. But Engines of Tomorrow deals with a central element that has gone largely unexamined: corporate research. It's the research process that provides the technologies that spur growth. Research is behind the renaissance of IBM, the stunning growth of Lucent, and much of the steamrolling American recovery. Focusing on the fast-moving communications-computer-electronics sector, Buder profiles some of the world's leading thinkers on innovation, talks with top inventors, and describes the exciting technologies coming down the pike -- from information appliances to electronic security and quantum computing. In the process, he examines the vital strategic issues in which central labs play a determining role, including: How IBM's eight labs around the world figure in Lou Gerstner's plans to achieve consistent double-digit growth -- and to join GE as a \$100 billion concern. Why Xerox's famed Palo Alto Research Center is vying to resuscitate its company's lagging fortunes by sending anthropologists into the field to study the hidden ways people really work. What Hewlett-Packard will do without its original instrument business, recently spun off as Agilent Technologies. The business was central to HP Labs' MC2 philosophy of merging research expertise in measurement, computation, and communication -- and its departure removed a lot that was unique about HP. How the November 1999 federal court finding that Microsoft operates a monopoly hinders the Seattle giant's acquisition plans and makes it increasingly vital for nine-year-old Microsoft Research to lead the way in innovating from within. Could this be the next great lab for the twenty-first century? With authority and undaunted optimism about the underlying vitality of the research process, Buder discusses these issues and reveals the future of some of the world's best and most powerful companies.
