Getting to Know the Coleman Lantern LT 17B

The Coleman LT 17B is a popular gas lantern known for its durability, bright light output, and ease of use. Often favored by campers, hikers, and emergency preparedness enthusiasts, the lantern uses Coleman's signature fuel system to provide a consistent glow for hours on end. Before diving into the operational details, it helps to familiarize yourself with the lantern's main components:

- **Fuel Tank:** Holds the liquid fuel that powers the lantern.
- **Generator:** Converts the liquid fuel into vapor.
- **Globe:** The glass enclosure protecting the mantles and flame.
- **Mantles:** The fabric mesh that produces bright white light when heated.
- **Valve and Pump:** Controls fuel flow and pressurizes the tank respectively.

Understanding these parts will make following the instructions in the coleman lantern lt 17b owners manual much easier.

How to Properly Set Up Your Coleman LT 17B Lantern

Filling the Fuel Tank

One of the first steps outlined in the coleman lantern lt 17b owners manual is filling the tank with the correct fuel. The LT 17B typically uses Coleman Fuel (also known as white gas), which burns cleanly and efficiently. To fill the tank safely:

1. Make sure the lantern is cool and turned off.
2. Unscrew the fuel cap and carefully pour in the fuel, avoiding overfilling.
3. Replace the cap securely to prevent leaks.

Always fill the tank outdoors or in a well-ventilated area away from open flames.

Pumping Air into the Tank

Pressurizing the fuel tank is crucial for proper fuel flow. The owners manual explains how to use the built-in pump:

- Close the pump by turning the knob clockwise.
- Open the pump knob slightly to allow air in and then close it again.
- Pump about 20-30 strokes to pressurize the tank sufficiently.

Proper pressure ensures a steady flame and bright light output.

Lighting the Lantern Safely

The coleman lantern lt 17b owners manual emphasizes safety during ignition. To light your lantern:

1. Open the valve slowly to release fuel vapor.

2. Hold a lit match or lighter near the mantles through the lighting hole.
3. Once lit, adjust the valve to achieve the desired brightness.

Never attempt to light the lantern without mantles installed or with leaking fuel.

Maintaining Your Coleman LT 17B for Longevity

Regular maintenance is key to keeping your lantern in peak condition. The coleman lantern lt 17b owners manual provides detailed steps to help you care for your lantern.

Replacing and Caring for Mantles

Mantles are essential for producing bright white light, but they are fragile and will wear out over time.

- Replace mantles when they become brittle or damaged.
- Tie the new mantles securely to the lantern's frame.
- Burn them gently at first to remove any loose ash before full ignition.

Proper mantle care ensures maximum light output during your camping trips.

Cleaning the Globe and Lens

A clean globe allows more light to shine through and prevents overheating.

- Remove the globe carefully according to the manual's instructions.
- Use a soft cloth and mild soap to clean soot and dirt.
- Dry thoroughly before reassembling.

Avoid using abrasive cleaners that might scratch the glass.

Checking and Cleaning the Generator

The generator can become clogged with residue from fuel combustion, leading to dim light or difficulty lighting.

- Remove the generator following the manual's guidelines.
- Use thin wire or a specially designed cleaning tool to clear blockages.
- Reinstall carefully to avoid damaging components.

Regular generator maintenance helps maintain efficient fuel flow and bright illumination.

Troubleshooting Common Issues with the Coleman LT 17B

Even the most well-maintained lantern can encounter problems. The Coleman lantern LT 17B owners manual includes troubleshooting tips for common issues:

Lantern Won't Light

This might be due to insufficient fuel pressure, clogged generator, or faulty mantles. Make sure the tank is properly pressurized, mantles are intact, and the generator is clean.

Light Is Dim or Flickering

A dim or flickering flame often signals a dirty generator, low fuel, or improper pumping. Clean the generator and ensure the tank is adequately pressurized.

Fuel Leaks

Fuel leaks are dangerous and require immediate attention. Inspect all seals, the fuel cap, and valve for damage. Replace faulty parts as recommended by the manual.
