East and West, two major worlds of aspirations, cultures, world-views, theoretical and practical approaches to life and death, have come closer by personal experiences of both Westerners and Easterners. But do we really understand the similarities and differences between the cultural-cognitive-behavioural-emotional patterns of the East and the West, with special regard to their neurobiological underpinnings in the human brain? The contents of this book focus on cultural patterns and cognitive patterns in the East and West, with special regard to those patterns which are determined by our natural-genetic endowments in contrast to those patterns which are influenced by our cultural ('East-West') influences, and within this context a

unique flavour is given to the 'good life' aspects of adapting to this global community. Published in collaboration with Institute Para Limes.

Forty-three internationally acclaimed scientists and thinkers share their vision for complexity science in the next decade in this invaluable book. Topics cover how complexity and big data science could help society to tackle the great challenges ahead, and how the newly established Complexity Science Hub Vienna might be a facilitator on this path. The chapters written by leading neuroscientists, give an overarching picture from the elementary organisational principles of the human brain through the basic perceptual and motor functions of the brain to the highest levels of cognition, including aesthetical or moral judgments, with an eye on what can be called 'good life' in both Eastern and Western cultures. A unique compilation of state-of-the-art overviews of how the human brain is organised and functions in order to achieve high level of social, moral or aesthetic thoughts across cultures.
