financial markets institutions 7th edition: *Institutional Learning and Knowledge Transfer Across Epistemic Communities* Elias G. Carayannis, Ali Pirzadeh, Denisa Popescu, 2011-11-25 Over the past several decades, as the pace of globalization has accelerated, operational issues of international coordination have often been overlooked. For example, the global financial crisis that began in 2007 is attributed, in part, to a lack of regulatory oversight. As a result, supranational organizations, such as the G-20, the World Bank, and the International Monetary Fund, have prioritized strengthening of the international financial architecture and providing opportunities for dialogue on national policies, international co-operation, and international financial institutions. Prevailing characteristics of the global economic systems, such as the increasing power of financial institutions, changes in the structure of global production, decline in the authority of nation-states over their national economy, and creation of global institutional setting, e.g., global governance have created the conditions for a naturally evolving process towards enabling national epistemic communities to create institutions that comply with global rules and regulations can control crises. In this context, transfer of technical knowledge from the larger organizations and its global epistemic communities to member communities is becoming a policy tool to “convince” participants in the international system to have similar ideas about which rules will govern their mutual participation. In the realm of finance and banking regulation, the primary focus is on transfer of specialized and procedural knowledge in technical domains (such as accounting procedures, payment systems, and corporate governance principles), thereby promoting institutional learning at national and local levels. In this volume, the authors provide in-depth analysis of initiatives to demonstrate how this type of knowledge generated at the internationalorganization level, is codified into global standards, and disseminated to members, particularly in the developing world, where the legal and regulatory infrastructure is often lacking. They argue that despite the challenges, when a country intends to join the global system, its institutions and economic structures need to move toward the global norms. In so doing, they shed new light on the dynamics of knowledge transfer, financial regulation, economic development, with particular respect to supporting global standards and avoiding future crises.

As a group, competitiveness in the developing countries has improved, but, while East Asian economies have had rapid export growth and technological upgrades, South Asian and African economies have lagged behind. Old structures, institutions, behavioural patterns and public policies are ill-adapted to deal with the challenges posed by technological change and economic liberalization. Consequently there is an urgent need for change in government and private sector attitudes and strategies. This volume seeks to generalise the lessons across developing country and enterprise cases, and sheds light on which trade and industrial strategies and instruments work best, and which do not work, in relation to manufacturing competitiveness.

financial markets institutions 7th edition: Stocks for All: People’s Capitalism in the Twenty-First Century Petri Mäntysaari, 2021-12-31 Public stock markets are too small. This book is an effort to rescue public stock markets in the EU and the US. There should be more companies with publicly-traded shares and more direct share ownership. Anchored in a broad historical study of the regulation of stock markets and companies in Europe and the US, the book proposes ways to create a new regulatory regime designed to help firms and facilitate people's capitalism. Through its comparative and historical study of regulation and legal practices, the book helps to understand the evolution of public stock markets from the nineteenth century to the present day. The book identifies design principles that reflect prior regulation. While continental European company law has produced many enduring design principles, the recent regulation of stock markets in the EU and the US has failed to serve the needs of both firms and retail investors. The book therefore proposes a new set of design principles to serve contemporary societal needs.

financial markets institutions 7th edition: Analysis and Evaluation of the Eurex Repo Market Model Monika Gruber, 2005-01-19 Inhaltsangabe:Abstract: The first cross-border merger of exchanges in Europe, in 1999, happened even across the borders of the EU when the national derivatives markets of Germany and Switzerland created Eurex. In 2000, Euronext, the second big merger project, became reality. The Exchanges of Amsterdam, Paris and Brussels created a new joint platform with corporate structure. Norex, Virt-X, Newex are further merger projects. During the last decade, not only the institutional framework of exchanges has changed, but also the popularity of different products that are traded on the new platforms. Currently the derivatives market, in particular the trading with repurchase agreements, experiences major growth in Europe as well as in the U.S. The Eurex Repo platform observes a steady increase of outstanding volume, due to the fact that Eurex Repo is the only electronic market that offers repo transactions with the shortest possible term of just one night (overnight repo transaction). The goal of this paper is to analyse and to critically assess the Eurex Repo market model mentioned above, which is currently treated as the most efficient and successful trading platform for derivatives, with a specific focus on repurchase agreements. Chapter 2 aims to give answers to the following questions: What is a repurchase agreement? Which are the characteristics of repo markets in general? Which risks are associated with repos and how does the pricing of repos work? Which other instruments for liquidity management do exist for banks? The purpose of Chapter 3 is to give an overview of the derivatives market in general, past business methods, the intermediating role of banks and exchanges, and the dynamic development of the derivatives market. In addition, the Eurex market model will be described, as well as competing market players in Europe and the U.S. In Chapter 4, the main focus is put on the examination and evaluation of the Eurex Repo market model in order to investigate the key drivers in this model. Considering Eurex expansion to the U.S., where the originally European exchange is competing with the major North American exchange CBoT since February 2004, and the advance of Eurex main competitor Euronext, the future perspectives for the Eurex Repo market model will be explored.
