forensic science scholarships 2023: Breaking In Ann Wolverton, Lisa Nagaoka, Mimi Wolverton, 2023-07-03 Why is it that, while women in the United States have generally made great strides in establishing parity with their male counterparts in educational attainment, they remain substantially underrepresented in the fields of science, technology, engineering, and mathematics (STEM)? Why is it that, in proportion to the PhDs they obtain in STEM, they attain fewer administrative and managerial positions in academia and industry than their numbers warrant and, moreover, are more likely leave the field once started in their careers? In the culture and context of women's advancement and satisfaction with careers in STEM, the data show that many challenges and obstacles remain. By showcasing the stories of eight women scientists who have achieved successful careers in the academy, industry and government, *Breaking In* offers vivid insights into the challenges and barriers that women face in entering STEM while also describing these women's motivations, the choices they made along their paths, and the intellectual satisfactions and excitement of scientific discovery they derive from their work. *Breaking In* underscores issues aspiring women scientists will encounter on their journeys and what they can do to forestall potential obstacles, advocate for change, and fulfill their ambitions. And it speaks to the question: What can be done to encourage more women to specialize in science, mathematics, and engineering? In doctoral granting institutions, where women must start if they hope to earn advanced degrees, *Breaking In* can serve both as a student text and as guide for department chairs and deans who are concerned about organizational climate and culture and their impact on retention in STEM fields. At a broader level, this book offers advice and inspiration to women contemplating entering STEM fields, as well to the teachers, researchers, and administrators responsible for nurturing these women, growing enrollments in their disciplines, and developing creative and intellectual capital that the nation needs to compete in the global marketplace.

forensic science scholarships 2023: Everyday Activists Christina M. Getrich, 2025-04-22 Strategies of resistance by undocumented young adults About 825,000 of the more than two million undocumented young adults in the United States benefited from the Deferred Action for Childhood Arrivals (DACA) program started by President Obama in 2012. Through DACA, these young adults are able to work legally in the United States and have been insulated from deportation. However, since President Trump's attempted termination of the program in 2017, DACA recipients have endured a rollercoaster of legal battles that have left them in an unimaginable state of prolonged limbo. Amid this rapidly shifting political climate, many undocumented young adults have joined the large-scale, high-visibility social movement to fight for policy change and immigrant justice. Yet often overlooked are the thousands more DACA recipients nationwide who have never participated in immigration-related activism. As Christina M. Getrich argues, in less publicly visible ways, they are nonetheless fighting for immigrant well-being and justice in their everyday adult lives, and their more private forms of action should be considered political activism. Drawing from five years of rich ethnographic research with a diverse population of thirty DACA recipients living in the Washington, D.C., area, *Everyday Activists* portrays the alternative political engagement strategies they enact in their daily lives as they leverage their unique knowledge bases and skill sets and make a meaningful

impact in their communities. The volume reveals how these young activists' strategies are instructive for thinking creatively about how to show up in our everyday lives for immigrants and others who are systematically subjected to social exclusion.
