In Portland, a webcam documents the torture and murder of kidnap victims. And in clandestine intelligence offices around the world, satellite technologies relentlessly pursue the targets of global conspiracies. Such plots represent only a fraction of the surveillance narratives that have become commonplace in recent cinema. Catherine Zimmer examines how technology and ideology have come together in cinematic form to play a functional role in the politics of surveillance. Drawing on the growing field of surveillance studies and the politics of contemporary monitoring practices, she demonstrates that screen narrative has served to organize political, racial, affective, and even material formations around and through surveillance. She considers how popular culture forms are intertwined with the current political landscape in which the imagery of anxiety, suspicion, war, and torture has become part of daily life. From *Enemy of the State* and *The Bourne Series* to *Saw*, *Caché* and *Zero Dark Thirty*, *Surveillance Cinema* explores in detail the narrative tropes and stylistic practices that characterize contemporary films and television series about surveillance.

jaden smith economic state of the world: *The Planning Moment* Sarah Blacker, Emily Brownell, Anindita Nag, Martina Schlünder, Sarah Van Beurden, 2024-05-07 Empires and their aftermaths were massive planning institutions; in the past two hundred years, the natural and social sciences emerged—at least in part—as modes of knowledge production for imperial planning. Yet these connections are frequently under-emphasized in the history of science and its corollary fields.

The Planning Moment explores the myriad ways plans and planning practices pervade recent global history. The book is built around twenty-seven brief case studies that explore the centrality of planning in colonial and postcolonial environments, relationships, and contexts, through a range of disciplines: the history of science, science and technology studies, colonial and postcolonial studies, urban studies, and the history of knowledge. If colonialism made certain landscapes, populations, and institutions legible while obscuring others, The Planning Moment reveals the frequently disruptive and violent processes of erasure in imperial planning by examining how “common sense” was produced and how the intransigence of planning persists long after decolonization. In recognizing the resistance and subversion that often met colonial plans, the book makes visible a range of strategies and techniques by which planning was modified and reappropriated, and by which decolonial futures might be imagined.
