ipremier company case analysis: BCA James W. Brannock, 2004 This book first takes the reader through a simple example -- the 8 day BCA (Part 1). This illustration provides an easy to understand approach for a relatively simple decision support problem -- whether or not to upgrade existing office computers. It is deceptive, however, in that it acquaints the reader with many of the analysis tools that are actually used for much more complex business decisions -- and that are often found in expensive management studies. The book then progresses into an overview of the concepts behind these decision support approaches (Part 2). Featured are topics dealing with the historical development of the techniques, and with the inevitable need to reconcile human perceptions with mechanical calculations. A socio-technical theory is presented as a potential approach for reconciliation of human-mathematical aspects of business decisions. Next, comprehensive examples of specific decision support techniques illustrate calculations and algorithms for many of the most common business situations (Part 3). Examples for specific techniques include how to develop economic, statistical and risk analyses, human process modelling and network analysis. Also, simulation, linear programming and inventory models (for both consumables and repairable items) are illustrated. In these detailed examples the book reveals many of the secrets that professional consultants use for all sorts of business analysis situations. Finally, step-by-step procedures provide both descriptive report guidelines and an example final briefing for finished BCA reports (Part 4). Following this basic approach, the reader learns how to conduct their own business case analysis; or, alternatively, what they should expect when consultants are used. This comprehensive 'how to'

approach that considers both behavioural and management science aspects to decision support situations. It provides a refreshing, rarely found combination of these business decision support approaches.

A logical approach is offered, taking the reader through the analysis journey, from preparing to analyse a case study to conducting the analysis and maximising the impact going forwards. A comprehensive analysis task is incorporated, which asks the reader to reflect on a range of case data, understand the choices of analytical positioning and tool selection, and develop an analysis based on this positioning. Further pedagogical features include: Reflective practice exercises at the end of chapters, allowing the student to self-identify areas of strength and weakness as they develop through the process. Worked examples based on cases reproduced in the book, allowing the student to follow the analytical process that the author went through in different analysis modes. Quotes and analysis insights from former students who have previously conducted a strategic business case analysis, aiding reflective practice. As case study analysis continues as a core component of teaching across business schools, this unique text will help to build key skills in advanced undergraduate, postgraduate, MBA, and executive education students conducting strategic business case analysis. Support material includes PowerPoint slides as well as video content.
