study guide literacy cst new york: *Learning for sustainability in times of accelerating change* Arjen E.J. Wals, Peter Blaze Corcoran, 2023-09-04 We live in turbulent times, our world is changing at accelerating speed. Information is everywhere, but wisdom appears in short supply when trying to address key inter-related challenges of our time such as; runaway climate change, the loss of biodiversity, the depletion of natural resources, the on-going homogenization of culture, and rising inequity. Living in such times has implications for education and learning. This book explores the possibilities of designing and facilitating learning-based change and transitions towards sustainability. In 31 chapters contributors from across the world discuss (re)emerging forms of learning that not only assist in breaking down unsustainable routines, forms of governance, production and consumption, but also can help create ones that are more sustainable. The book has been divided into three parts: re-orienting science and society, re-connecting people and planet and re-imagining education and learning. This is essential reading for educators, educational designers, change agents, researchers, students, policymakers and entrepreneurs alike, who are concerned about the well-being of the planet and convinced of our ability to do better. The content and related issues can be discussed on the blog by editor Arjen Wals: Transformative learning. 'We are living in times of incertitude, complexity, and contestation, but also of connectivity, responsibility, and new opportunities. This book analyses the consequences of these times for learning in formal, non-formal, and informal education. It explores the possibilities offered by the concept of sustainability as a central category of a holistic paradigm which harmonizes human beings with Earth. To change people and to change the world are interdependent processes - this book contributes to both.' Moacir Gadotti, Director of Paulo Freire Institute, São Paulo, Brazil 'I hope you share my excitement about the innovations for sustainability that this book catalogues and analyses. While the ecological news is grim, the human news is not. Even in a time of accelerating change, people are showing their enormous capacities to learn, adapt, restore and protect.' From the Foreword by Juliet Schor, author of 'True Wealth: how and why millions of Americans are creating a time-rich, ecologically-light, small-scale high-satisfaction economy' 'This book implies a 'culture of critical commitment' in educational thinking and practice - engaged enough to make a real difference to social-ecological resilience and sustainability but reflexively critical enough to learn constantly from experience and to keep options open in working for a sustainability transformation.' From the Afterword by Stephen Sterling, Professor of Sustainability Education, Centre for Sustainable Futures, Plymouth University, United Kingdom

study guide literacy cst new york: Overtested Jessica Zacher-Pandya, 2015-04-24 This timely book explores what is often overlooked in policy debates about the education of English language learners: how the day-to-day dynamics of the classroom are affected by high-stakes testing and the pressures students and teachers experience and internalize as a result. The author presents and analyzes classroom observations, student work, and test scores, as well as interviews with students and teachers. A disturbing picture of today's overtested public school classroom emerges from the events and practices described in this book. While hard to believe, all the depictions presented took place in a real elementary school classroom and reflect the current culture of extreme accountability. Overtested not only describes the flaws in our current accountability system, but it also provides real-world solutions that can have an immediate and positive effect at the classroom, state, and national level. Chapters address key debates such as how to measure proficiency, the validity of various language assessment tools, the overuse of assessment, and the risks and benefits of teaching language arts to English language learners via mandated, structured curricula. Jessica Zacher Pandya is an Associate Professor in the Departments of Teacher Education and Liberal Studies at California State University, Long Beach. "This book tells an important tale that cannot be conveyed by numbers and tables.... It is important information for teachers; for those who depend on, employ, and train teachers; and for those who create the policies under which teachers are required to operate." —From the Foreword by Robert Rueda, University of Southern California, author of *The 3 Dimensions of Improving Student Performance: Finding the Right Solutions to the Right Problems* "How many more dire tales of 'schooling for assessment' must be told before we realize that teaching and testing are not the same and that scores on standardized, multiple choice achievement tests are a sorry substitute for an engaging learning environment? In this book, Jessica Zacher Pandya reaches across ideological and institutional borders to offer reasonable, pragmatic solutions for change." —Linda Valli, Jeffrey & David Mullan Professor of Teacher Education & Professional Development, College of Education, University of Maryland "Zacher Pandya's invaluable book exposes the injustices and absurdities of our high-stakes accountability era. Just as importantly, it limns a more academically robust and culturally relevant instructional vision for English language learners." —Gerald Campano, University of Pennsylvania

study guide literacy cst new york: The Nature of Technology Michael P. Clough, Joanne K. Olson, Dale S Niederhauser, 2013-09-03 How does technology alter thinking and action without our awareness? How can instantaneous information access impede understanding and wisdom? How does technology alter conceptions of education, schooling, teaching and what learning entails? What are the implications of these and other technology issues for society? Meaningful technology education is far more than learning how to use technology. It entails an understanding of the nature of technology — what technology is, how and why technology is developed, how individuals and society direct, react to, and are sometimes unwittingly changed by technology. This book places these and other issues regarding the nature of technology in the context of learning, teaching and schooling. The nature of technology and its impact on education must become a significant object of inquiry among educators. Students must come to understand the nature of technology so that they can make informed decisions regarding how technology may influence thinking, values and action, and when and how technology should be used in their personal lives and in society. Prudent choices regarding technology cannot be made without understanding the issues that this book raises. This book is intended to raise such issues and stimulate thinking and action among teachers, teacher educators, and education researchers. The contributions to this book raise historical and philosophical issues regarding the nature of technology and their implications for education; challenge teacher educators and teachers to promote understanding of the nature of technology; and provide practical considerations for teaching the nature of technology.
