political science uc davis: The ^AOxford Companion to Politics of the World Joel Krieger, 2001-08-02 The world has seen dramatic changes since the publication of the first edition of The Oxford Companion to Politics of the World in 1993. In the post-Cold War world, globalization now offers wealth and opportunities on a broader scale, as well as greater international harmony, but threatens to reinforce the advantage gap between wealthy and poor regions and intensify environmental degradation. Conflict and squalor--expressed in brutal brushfire wars, epidemics, and chronic underdevelopment--vie with equally dramatic accounts of growth and democracy associated with a liberal political order and the global diffusion of trade, investment, and communications. Drawing on the breadth of the first edition, this updated edition reflects the changing world with a reassessment of many of the core themes of the Companion, and new articles on the people, concepts, and events that have shaped the world since 1993. The second edition includes

biographies of Kofi Annan, Tony Blair, Bill Clinton, and Gerhard Schroder; articles on events such as the Rwandan Genocide and the war in Kosovo; and coverage of international trade developments such as NAFTA and the World Trade Organization. Eighty-seven of the 672 articles in the Second Edition are completely new; most others are thoroughly revised. This edition also features a substantial new set of articles, a dozen essays on critical issues written by influential figures. Recognizing the importance of including varying viewpoints, the editors have commissioned these essays to provide an informed and often passionate debate on controversial topics. Discussions include Lani Guinier and Glenn Loury on Affirmative Action; Francis Fukuyama and Milton Fisk on the Limits of Liberal Democracy; and Lloyd Axworthy and John Bolton on the United Nations. The contributors discuss nearly every nation in the world, including extensive information on institutions, political parties, leaders, and the sources of political mobilization and conflict. The volume also includes biographies of more than seventy-five political leaders and thinkers who have shaped the contemporary political world. Articles include detailed discussions of critical historical developments and events, concepts, international law, and organizations. The Oxford Companion to Politics of the World, Second Edition is an accessible, timely, thought-provoking, and comprehensive reference that captures the complexity and vitality of contemporary world affairs.

political science uc davis: The Parties Respond Mark D. Brewer, 2018-04-20 The industrial revolution was the single most important development in human history over the past three centuries, and it continues to shape the contemporary world. With new methods and organizations for producing goods, industrialization altered where people live, how they play, and even how they define political issues. By exploring the ways the industrial revolution reshaped world history, this book offers a unique look into the international factors that started the industrial revolution and its global spread and impact.

political science uc davis: Democracy at Risk Jennifer L. Merolla, Elizabeth J. Zechmeister, 2009-10-15 How do threats of terrorism affect the opinions of citizens? Speculation abounds, but until now no one had marshaled hard evidence to explain the complexities of this relationship. Drawing on data from surveys and original experiments they conducted in the United States and Mexico, Jennifer Merolla and Elizabeth Zechmeister demonstrate how our strategies for coping with terrorist threats significantly influence our attitudes toward fellow citizens, political leaders, and foreign nations. The authors reveal, for example, that some people try to restore a sense of order and control through increased wariness of others—especially of those who exist outside the societal mainstream. Additionally, voters under threat tend to prize “strong leadership” more highly than partisan affiliation, making some politicians seem more charismatic than they otherwise would. The authors show that a wary public will sometimes continue to empower such leaders after they have been elected, giving them greater authority even at the expense of institutional checks and balances. Having demonstrated that a climate of terrorist threat also increases support for restrictive laws at home and engagement against terrorists abroad, Merolla and Zechmeister conclude that our responses to such threats can put democracy at risk.

political science uc davis: The International Spread of Ethnic Conflict David A. Lake, Donald Rothchild, 2020-10-06 The wave of ethnic conflict that has recently swept across parts of Eastern Europe, the former Soviet Union, and Africa has led many political observers to fear that these conflicts are contagious. Initial outbreaks in such places as Bosnia, Chechnya, and Rwanda, if not contained, appear capable of setting off epidemics of catastrophic proportions. In this volume, David Lake and Donald Rothchild have organized an ambitious, sophisticated exploration of both the origins and spread of ethnic conflict, one that will be useful to policymakers and theorists alike. The

editors and contributors argue that ethnic conflict is not caused directly by intergroup differences or centuries-old feuds and that the collapse of the Soviet Union did not simply uncork ethnic passions long suppressed. They look instead at how anxieties over security, competition for resources, breakdown in communication with the government, and the inability to make enduring commitments lead ethnic groups into conflict, and they consider the strategic interactions that underlie ethnic conflict and its effective management. How, why, and when do ethnic conflicts either diffuse by precipitating similar conflicts elsewhere or escalate by bringing in outside parties? How can such transnational ethnic conflicts best be managed? Following an introduction by the editors, which lays a strong theoretical foundation for approaching these questions, Timur Kuran, Stuart Hill, Donald Rothchild, Colin Cameron, Will H. Moore, and David R. Davis examine the diffusion of ideas across national borders and ethnic alliances. Without disputing that conflict can spread, James D. Fearon, Stephen M. Saideman, Sandra Halperin, and Paula Garb argue that ethnic conflict today is primarily a local phenomenon and that it is breaking out in many places simultaneously for similar but largely independent reasons. Stephen D. Krasner, Daniel T. Froats, Cynthia S. Kaplan, Edmond J. Keller, Bruce W. Jentleson, and I. William Zartman focus on the management of transnational ethnic conflicts and emphasize the importance of domestic confidence-building measures, international intervention, and preventive diplomacy.

political science uc davis: The Human Face of Global Mobility Adrian Favell, 2017-07-12
 Alongside flows of trade and capital, the free movement of professionals, technical personnel, and students is seen as a key aspect of globalization. Yet not much detailed empirical research has been completed about the trajectories and experiences of these highly skilled or highly educated international migrants. What little is known about these forms of global mobility, and the politics that surround them, contrasts with the abundant theories and accounts of other types of international migration--such as low income economic migration from less developed to core countries in the international political economy. Drawing on the work of a long-standing discussion group at the Center for Comparative and Global Research of UCLA's International Institute, this collection bridges conventional methodological divides, bringing together political scientists, sociologists, demographers, and ethnographers. It explores the reality behind assumptions about these new global migration trends. It challenges widely held views about the elite characteristics of these migrants, the costs and consequences of the brain drain said to follow from the migration of skilled workers, the determinants of national policies on high skilled migrants, and the presumed effortlessness of professional mobility in an integrating world. The volume also sheds new light on international student migration, the politics of temporary, non-immigrant workers in the United States, new international forms of regulating movement, and the realities of the everyday lives of multinational employees in the world's transnational cities. Key differences between the regional contexts of this migration in Europe, North America, and the Asia-Pacific are also emphasized.

political science uc davis: Censorship and Silencing Robert Post, 1998 Censorship was once a predictable topic, dividing liberals and conservatives down the middle on issues like obscenity and national security. Today, the debate over the regulation of speech offers no such easy dichotomy, with feminists joining forces with religious fundamentalists to control pornography, and abortion rights advocates seeking to restrict clinic demonstrations while prolife groups defend their freedom to picket. Underlying this trend is a fundamental intellectual shift--exemplified by the work of Michel Foucault--that holds that the state is not the only agent of censorship. The thirteen contributors here explore the topic of censorship from the viewpoint of numerous disciplines and viewpoints.

political science uc davis: Lawmaking by Initiative Philip L. Dubois, 1998 This book describes the history of the initiative process and the major issues that have arisen during its increasing use in

recent years. By elucidating the problems that have arisen and their possible solutions, the authors seek both to inform the debate about the wisdom of the initiative and to offer suggestions for improvement to jurisdictions that choose to use the process. With the aid of more than 40 charts and tables, the authors compare the major features of the initiative in the American jurisdictions that have adopted the procedure—24 states and the District of Columbia. They draw particularly on the experience in California, the most frequent U.S. user of the initiative and a major battleground in the development of ideas about the process. The book also discusses the use of the initiative in other countries, particularly Switzerland, where the process originated and the only other major country in the world that makes extensive use of the initiative today.

political science uc davis: *National Security in the Information Age* Emily O. Goldman, 2004-08-02 As the activities of individuals, organizations, and nations increasingly occur in cyberspace, the security of those activities is becoming a growing concern. Political, economic and military leaders must manage and reduce the level of risk associated with threats from hostile states, malevolent nonstate actors such as organized terrorist groups or individual hackers, and high-tech accidents. The impact of the information technology revolution on warfare, global stability, governance, and even the meaning of existing security constructs like deterrence is significant. These essays examine the ways in which the information technology revolution has affected the logic of deterrence and crisis management, definitions of peace and war, democratic constraints on conflict, the conduct of and military organization for war, and the growing role of the private sector in providing security.
