Bestselling author David Brock documents the most important political development of the last thirty years: How the Republican Right has won political power and hijacked public discourse in the United States. Over the last several decades, the GOP has built a powerful media machine—newspapers and magazines, think tanks, talk radio networks, op-ed columnists, the FOX News Channel, Christian Right broadcasting, book publishers, and high-traffic Internet sites—to sell conservatism to the public and discredit its opponents. David Brock's penetrating analysis of news stories, from the disputed 2000 presidential election to the war in Iraq to the political battles of 2004, reveals that this booming right-wing media market is largely based on bigotry, ignorance, and emotional manipulation closely tied to America's long-standing cultural divisions and the buying power of anti-intellectual traditionalists. Writing with verve and deep insight, Brock reaches far beyond typical bromides about media bias to produce an invaluable account of the rise of right-wing media and its political consequences.

us news and business report david allen: Beyond the Ruins Jefferson Cowie, Joseph Heathcott, 2003 The immediate impact of deindustrialization?the suffering inflicted upon workers, their families, and their communities?has been widely reported by scholars and journalists. In this important volume, the authors seek to move discussion of America's industrial decline beyond the immediate ramifications of plant shutdowns by placing it into a broader social, political, and economic context. Emphasizing a historical approach, the authors explore the multiple meanings of one of the major transformations of the twentieth century. The concept of deindustrialization entered the popular and scholarly lexicon in 1982 with the publication of *The Deindustrialization of America*, by Barry Bluestone and Bennett Harrison. *Beyond the Ruins* both builds upon and departs from the insights presented in that benchmark study. In this volume, the authors rethink the chronology, memory, geography, culture, and politics of industrial change in America. Taken together, these original essays argue that deindustrialization is not a story of a single emblematic place, such as Flint or Youngstown, or a specific time period, such as the 1980s. Nor is it limited to the abandoned factory buildings associated with heavy industry. Rather, deindustrialization is a complex process that is uneven in its causes, timing, and consequences. The essays in this volume examine this process through a wide range of topics, from worker narratives and media imagery, to suburban politics, environmental activism, and commemoration.
