A SQL Server DBA is responsible for installing, configuring, and maintaining SQL Server databases, ensuring their availability, performance tuning, backup and recovery, security management, and troubleshooting database issues.

How do you perform database backup and restore in SQL Server?

Database backups in SQL Server can be performed using T-SQL commands like BACKUP DATABASE for full backups, BACKUP LOG for transaction log backups, and can be scheduled with SQL Server Agent. Restores are performed with RESTORE DATABASE commands specifying the backup files and recovery options.

What are the different types of database backups available in SQL Server?

SQL Server supports Full backups, Differential backups, Transaction Log backups, File and Filegroup backups, and Copy-only backups. Each serves different recovery scenarios and strategies.

How do you monitor SQL Server performance and identify bottlenecks?

Performance can be monitored using tools like SQL Server Profiler, Extended Events, Performance Monitor, and Dynamic Management Views (DMVs). Key metrics include CPU usage, memory consumption, I/O statistics, wait stats, and query execution plans to identify bottlenecks.

What is the difference between clustered and non-

clustered indexes in SQL Server?

A clustered index determines the physical order of data in a table and there can be only one per table. A non-clustered index is a separate structure that points to the data and multiple non-clustered indexes can exist per table.

How do you handle SQL Server security and permissions management?

Security is managed by creating logins, users, roles, and assigning appropriate permissions using GRANT, DENY, and REVOKE statements. Always follow the principle of least privilege to restrict access and apply encryption where needed.

What steps do you take for SQL Server disaster recovery planning?

Disaster recovery planning involves regular backups, maintaining transaction log backups for point-in-time recovery, implementing high availability solutions like Always On Availability Groups or Failover Clustering, testing restore procedures, and documenting recovery processes.
